Blood Culture Safety
First and always.

BacT/ALERT® is the only system that offers plastic blood culture collection bottles and improves safety at every step. Lightweight bottles can be sent through pneumatic tube systems without special holders. Why trust your samples to breakable glass bottles?
Strong Outside, Strong Inside

Plastic. Fantastic!

Break resistant
Lightweight: weighs 1/2 to 2/3 less than glass.

“OSHA makes it clear: using glass in the laboratory when an equivalent plastic alternative is available must be justified in writing.”

Multi-layer, gas-impermeable design

Specimen Collection. Safety Adapters.

Multiple options to fit into a variety of protocols
• Bell shaped adapters
• Luer lock adapters
• Subculture adapters

Weighs less for easier transport and shipping
Pneumatic transport without a special container
Ergonomic design
More space efficient storage
Multi-layer, gas-impermeable design
Less costly biohazard disposal
